Types of Graphic Images:

InDesign supports various types of graphic images, including:

Vector graphics:

Vector graphics are created using mathematical equations and are resolution-independent, meaning (यसको मतलब) that they can be scaled up or down without losing quality.

Examples of vector graphics include logos, icons, and illustrations.

Vector graphics अरु mathematical equation use गरेर बनाइएको हुन्छन् र यिनीहरू resolution-independent हुन्छन् | यसको मतलब होमीले quality loose नगरी Vector graphics लाई scale Up वा scale down गर्नसक्छौं

Raster images:

Raster images are made up of pixels and are resolution-dependent, meaning that their quality decreases when they are scaled up.

Examples of raster images include photographs and scanned images.

Raster Imageहरू Pixels (BATA) मिलेर बनेका हुन्छन् र रिजोल्युसनमा निर्भर हुन्छन्, यसको मतलब तिनीहरूको गुणस्तर घट्दै जान्छ When they scaled up.

EPS (Encapsulated PostScript) files:

EPS files are vector graphics files that can be imported into InDesign. They are often used for logos and other graphic elements that need to be high-quality and scalable.

EPS फाइलहरू भेक्टर ग्राफिक्स फाइलहरू हुन् जसलाई InDesign मा Import गर्न सकिन्छ । तिनीहरू प्रायः लोगो र अन्य ग्राफिकको लागि प्रयोग गरिन्छ र जुन High Quality र Scalable हुन आवश्यक छ।

PDF (Portable Document Format) files:

PDF files can contain both vector and raster graphics and are often used for importing complex graphics into InDesign.

PDF filesमा हामीले दुवै vector and raster graphics contain गर्नसक्छ or राख्न सक्छौं र हामीले InDesign मा complex graphics हरु import गर्न पनि pdf use गर्छौं

InDesign Native Graphics :

InDesign also allows you to create graphics within the program using tools such as the Pen Tool and the Shape Tool.

InDesign ले हामीलाई Program भित्र ग्राफिक्स Create गर्न अनुमति दिन्छ, Pen Tool र Shape Tool जस्ता Toolहरू Use गरेर।
